According to our (Global Info Research) latest study, the global Mining Truck Diesel Engine market size was valued at US\$ 2166 million in 2025 and is forecast to a readjusted size of US\$ 2874 million by 2032 with a CAGR of 4.1% during review period.

Mining truck diesel engines are high-power industrial power units specifically designed for mining transportation equipment (such as rigid mining trucks and articulated mining trucks). They typically employ large-displacement inline or V-type multi-cylinder structures (such as V12 and V16), combined with turbocharging and high-pressure common rail technology, to output extremely high torque at low speeds, meeting the demands of heavy-load starts, long-slope transportation, and long-term continuous operation. They can also be used in conjunction with diesel-electric drive systems. In terms of price, their cost varies significantly with power output: medium-power models typically range from \$20,000 to \$100,000, while mainstream mining truck engines are mostly in the \$200,000 to \$600,000 range.
