Abstracts

The global Mining Truck Diesel Engine market size is expected to reach \$ 2874 million by 2032, rising at a market growth of 4.1% CAGR during the forecast period (2026-2032).

Mining truck diesel engines are high-power industrial power units specifically designed for mining transportation equipment (such as rigid mining trucks and articulated mining trucks). They typically employ large-displacement inline or V-type multi-cylinder structures (such as V12 and V16), combined with turbocharging and high-pressure common rail technology, to output extremely high torque at low speeds, meeting the demands of heavy-load starts, long-slope transportation, and long-term continuous operation. They can also be used in conjunction with diesel-electric drive systems. In terms of price, their cost varies significantly with power output: medium-power models typically range from \$20,000 to \$100,000, while mainstream mining truck engines are mostly in the \$200,000 to \$600,000 range.
