According to our (Global Info Research) latest study, the global Mining Waste Management market size was valued at USD 16610 million in 2023 and is forecast to a readjusted size of USD 24700 million by 2030 with a CAGR of 5.8% during review period.

Waste occurs in several stages of the mining process and throughout the life of the mine, from the first exploration drilling project to the last processed material before mine closure. Several types of waste are generated in a mine, but three types stand out with the largest volume: waste rock, tailings and mine water. Not all waste is considered harmful to the environment. Some waste might even be safe to use in other applications, such as in building materials

The industry's leading producers are BHP Group, Rio Tinto and Vale, with revenues of 7.51%, 6.91% and 5.80% respectively in 2019.
