Mirrorless interchangeable lens cameras are a type of digital camera that eliminates the traditional SLR camera's reflex mirror and optical viewfinder system, using an electronic viewfinder or screen for live framing and supporting interchangeable lenses. Their core features are a simpler structure and lighter body, while leveraging high-speed image sensors and digital processors to achieve high image quality and high-speed continuous shooting. They have become the mainstream form of interchangeable lens cameras. In 2025, global sales of mirrorless cameras were approximately 650,000 units, with an average selling price of approximately \$820 and a capacity utilization rate of approximately 80%. Upstream companies mainly come from the manufacturing fields of CMOS image sensors, optical lenses, image processing chips, precision electronics, and structural components. Downstream companies are concentrated in consumer electronics retail, professional photography services, film and television production, media organizations, and content creation industries. The industry's gross profit margin is approximately 30%. In terms of product cost structure, image sensors and processing chips account for approximately 35%, optical lenses and modules approximately 25%, body structure and electronic components approximately 20%, and software algorithms and image calibration approximately 10%. The market share of Tao and brand marketing accounts for approximately 10%. The downstream demand list includes professional photography creation, short video and live streaming shooting, commercial advertising production, film and television content production, and high-end travel

documentation. The downstream customer list covers professional photographers, video creators, film and television production companies, media organizations, e-commerce content teams, and high-end photography enthusiasts. Industry opportunities mainly come from policy-driven factors such as support for the cultural industry and digital content industry, technology-driven factors such as advancements in high-pixel sensors and AI image processing technology, and changes in consumer demands such as the explosive growth in demand for short video creation and high-quality image documentation, which drive products to develop towards high image quality, video capabilities, and intelligence.
