Abstracts

The global Mirvetuximab Soravtansine market size is expected to reach \$ 2621 million by 2032, rising at a market growth of 15.9% CAGR during the forecast period (2026-2032).

Mirvetuximab Soravtansine is an antibody-drug conjugate (ADC) targeting folate receptor ? (FR?). It is covalently formed by conjugating a humanized anti-FR? monoclonal antibody, a cleavable linker, and the microtubule inhibitor DM4. The drug can specifically recognize and bind to highly expressed FR? on the surface of tumor cells, release cytotoxic payloads after endocytosis into cells, and precisely kill tumor cells. It is mainly used for the treatment of malignant tumors such as FR?-positive recurrent ovarian cancer. Featuring high targeting ability and strong anti-tumor activity, it provides an important targeted therapeutic option for patients with advanced ovarian cancer. In 2025, global Mirvetuximab Soravtansine production reached approximately 105,000–110,000 vials.

As a globally pioneering and the only approved FR?-targeted ADC drug, Mirvetuximab Soravtansine has established significant clinical and market advantages in the field of platinum-resistant ovarian cancer. Its core value lies in the high efficacy and low toxicity profile brought by its precise targeting mechanism, which effectively addresses the long-unmet clinical needs. The global market is mainly led by the United States, and with successive approvals and commercialization in major markets such as the European Union and China, the product has shown a trend of rapid growth. Supported by priority recommendations in authoritative guidelines, it has further driven continuous improvements in physician prescriptions and patient penetration. In China, the commercialization is led by Huadong Medicine, which has achieved early market access and rapid nationwide coverage through favorable innovative drug policies. The

advantages of local channels and academic promotion are gradually unlocking market potential. Looking ahead, its market growth will rely on the continuous penetration of ovarian cancer indications on the one hand, and the potential clinical expansion into other FR⁺-highly-expressing tumors on the other. Meanwhile, it faces multiple constraints including limited accessibility due to high pricing, the progress of medical insurance coverage, and the development of competing products targeting the same target in the future. Overall, the market is expected to grow steadily while accompanied by uncertainties from competition and policy changes.
