MIS(Molded Interconnect Substrate) is different than traditional substrates, as the technology consists of a pre-molded structure with one or more layers. Each layer is pre-configured with copper plating or interconnects to provide electrical connections in the package. All told, MIS supports single- or multi-die configurations, enabling low-profile, fine-pitch packages. It can be used to develop souped-up leaded packages, flip-chip, modules and system-in-packages (SiPs).

According to our (Global Info Research) latest study, the global MIS & C2iM Substrate market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
