The global MIS Sacroiliac Joint Fusion market size is expected to reach \$ 950 million by 2032, rising at a market growth of 12.4% CAGR during the forecast period (2026-2032).

Sacroiliac joint fusion is a surgical procedure which fuses the iliac bone (pelvis) to the spine (sacrum) for stabilization. It is performed for a variety of conditions including trauma, infection, cancer, and spinal instability. Sacroiliac joint fusion may be performed as a minimally invasive surgical (MIS) procedure or as an open surgical procedure requiring a larger incision and subsequent increased recovery time. Percutaneous SIJ fusion is a MIS approach in which instrumentation involving cages or screws, with or without bone graft, are placed percutaneously in order to achieve a fusion. Fusion of the SIJ, combined with bone grafts and other metal implant devices, is an extensive procedure; generally considered a salvage procedure when all other measures have failed to provide pain relief.

The MIS sacroiliac (SI) joint fusion market is growing steadily, driven by the rising recognition of sacroiliac joint dysfunction as a source of chronic lower back pain. Leading manufacturers like SI-BONE, Medtronic, and Zimmer Biomet dominate the space with well-established implant systems and extensive clinical validation. Emerging players such as CoreLink and VGI Medical are differentiating through innovative fixation techniques and improved implant designs. The market is witnessing increased surgeon adoption of minimally invasive approaches due to reduced operative time, lower blood loss, and quicker recovery. Future trends point to the integration of navigation and robotic guidance systems to enhance precision, as well as biologic augmentation to promote faster fusion.
