Abstracts

According to our (Global Info Research) latest study, the global Mist Cooling Fan market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Mist/fog cooling fans are cooling devices that release mist generated by ultrasonic waves or other means, combined with airflow from a blower. By utilizing the heat of vaporization principle, where heat is absorbed as water evaporates, these fans can lower the temperature by 37 to 41 °F below ambient temperature.

They are suitable for those preferring mild cooling effects over the strong cooling of air conditioners, offering a balance of coolness and humidity. These fans are versatile, providing humidification in winter and cooling in summer.

Portable and tabletop mist/fog cooling fans are popular for personal use during outdoor activities, such as watching sports or walking, or as desk cooling fans in the office or kitchen. Stationary mist/fog cooling fans often supplement air conditioning or traditional fans and are equipped with various functions. In commercial settings, mobile misting fans, attached to large fans, are used in spacious areas like factories, construction sites, and outdoor events. Some powerful models deliver cool air up to 30 meters away.
