Abstracts

Mitochondrial myopathies are types of myopathies associated with mitochondrial disease. On biopsy, the muscle tissue of patients with these diseases usually demonstrate 'ragged red' muscle fibers. These ragged-red fibers contain mild accumulations of glycogen and neutral lipids, and may show an increased reactivity for succinate dehydrogenase and a decreased reactivity for cytochrome c oxidase.

SCOPE OF THE REPORT:

This report studies the Mitochondrial Myopathies market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Mitochondrial Myopathies market by product type and applications/end industries.

The identification of patients with possible MM depends upon the investigation of multiple organ dysfunction in the clinical history, examination, and clinical tests.

Although there is no disease-modifying therapy for MM, there are numerous points of clinical relevance that can reduce morbidity and improve quality of life for patients with these disorders.
