Abstracts

The mitral valve is composed of the mitral valve annulus, mitral valve leaflets, chordae tendineae and papillary muscles. One part of the mitral valve leaflet including the anterior and posterior leaflets is connected to the mitral valve annulus, and the other end is connected to the chordae tendineae, while the chordae tendineae is connected to the mitral valve annulus. It is connected to the papillary muscle and constitutes the structural integrity of the mitral valve. The integrity of mitral valve function requires that the size of the mitral valve annulus is appropriate, the valve leaflet structure is complete, the papillary muscles contract and stretch the chordae tendineae to support the valve leaflets, the left ventricular muscle contraction produces appropriate closing force, and the ventricular morphology and function are normal.
