A mixed bed deionizer is a device used to remove ions from water by mixing cation resins and anion resins together to remove positive and negative ions from the water. The working principle of this device is based on ion exchange technology, where cations are replaced with hydrogen ions and anions are replaced with hydroxide ions when water flows through a mixed resin bed, thereby producing pure water. Mixed bed deionizers are commonly used in applications that require high purity water, such as the electronics, pharmaceutical, and chemical industries.
