According to our (Global Info Research) latest study, the global Mixed Signal System-on-Chip (MxSoC) market size was valued at USD 264470 million in 2023 and is forecast to a readjusted size of USD 619100 million by 2030 with a CAGR of 12.9% during review period.

Mixed Signal SoC (MxSoC, in short) is a relatively new category in SoC, which is designed for mixed signal (handling both analog and digital purposes).

Smart sensor is one of the most exciting areas of Mixed Signal SoC design in today's market place. Many of these devices overlap areas already discussed. Mixed signal sensor SoCs are moving toward distributed intelligence in their sensor elements. This move is very prevalent in both the automotive and industrial automation market segments. These however, are examples where the deep sub-micron technologies often are not the best choice. For one thing the analog portion of the design tends to make up most of the die space and these markets demand mature, well-characterized processes. For this reason many of these devices fit quite well in 0.35 and 0.5 micron technologies.
