Abstracts

The global MLaaS Platform market size is expected to reach $ 8059.4 million by 2030, rising at a market growth of 18.7% CAGR during the forecast period (2024-2030).

Machine Learning as a Service (MLaaS) is machine learning technology that is conscripted from another business. This is similar to SaaS (Software as a Service) or PaaS (Platform as a Service), meaning you use the services of a company, rather than wholly create your own.

Using MLaaS means the computation is handled outside of your company – you pay for the machine learning services you need, and data storage may be handled on your personal servers or in the cloud (usually offered with MLaaS providers).

MLaaS software can be used to automatically analyze online product reviews and respond to customers, streamline processes by automating tasks like ticket routing, and even power self-driving cars.

This report studies the global MLaaS Platform demand, key companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for MLaaS Platform, and provides market size (US$ million) and Year-over-Year (YoY) growth, considering 2023 as the base year. This report explores demand trends and competition, as well as details the characteristics of MLaaS Platform that contribute to its increasing demand across many markets.
