Mixed metal oxide (MMO) coated titanium electrodes, also called Dimensionally Stable Anodes (DSA), are devices with high conductivity and corrosion resistance for use as anodes in electrolysis. They are made by coating a titanium substrate with several kinds of metal oxides. One oxide is usually RuO₂, IrO₂, or PtO₂, which conducts electricity and catalyzes the desired reaction such as the production of chlorine gas. The other metal oxide is typically titanium dioxide which does not conduct or catalyze the reaction, but is cheaper and prevents corrosion of the interior.
