## Abstracts

The global MMO Coated Titanium Electrodes market size is expected to reach \$ 822 million by 2032, rising at a market growth of 4.0% CAGR during the forecast period (2026-2032).

The MMO coated titanium electrode is an electrode material coated with one or more layers of metal oxide on the surface of a titanium substrate. This coating features low resistivity, good conductivity, stable chemical composition and crystal structure, dimensional stability of the electrode, strong corrosion resistance, and long service life. Furthermore, MMO-coated titanium electrodes exhibit excellent electrocatalytic performance, which is conducive to reducing the overpotential of oxygen evolution and chlorine evolution reactions, thereby saving electrical energy. Due to these superior properties, MMO-coated titanium electrodes have been widely applied in various fields such as electroplating, electrolysis, wastewater treatment, and electrochemical synthesis, demonstrating their irreplaceable value. The product has an annual output of approximately 2 million square meters, and the price varies considerably depending on the materials used, with an average price of approximately US\$300 per square meter.

Upstream for MMO Coated Titanium Electrodes starts with titanium sponge/ingot supply and mill processing into plates, meshes, tubes, or porous substrates, plus sourcing of catalytic and barrier-layer materials such as platinum-group metals and precursor salts (Ir/Ru/Pt, Ta, Sn, Sb, etc.), ceramic/oxide powders, binders, and specialty chemicals for surface preparation; manufacturers then fabricate the titanium substrate, activate the surface (degreasing, pickling, grit blasting/etching), and apply the functional layers by thermal decomposition, electroplating, sputtering, sol-gel, CVD/ALD, or sintering, followed by curing, inspection, and electrochemical qualification, with cost and lead time heavily influenced by precious-metal prices and coating yield. Downstream, these

electrodes are sold directly or via integrators to OEMs and end users in chlor-alkali/electrochlorination, wastewater treatment, electroplating and metal finishing, electrowinning, cathodic protection, and some electrolyzers, where value is realized through energy efficiency and service life; recurring aftermarket demand comes from recoating/refurbishment, replacement of worn anodes, and consumables/services tied to system operation (power supplies, rectifiers, control systems), while adoption is shaped by total cost of ownership, compliance requirements, and the customer's ability to standardize electrode geometry and coating specification across multiple lines.

MMO Coated Titanium Electrodes occupy a specialty position in electrochemical equipment supply chains because they compete primarily on total cost of ownership rather than on upfront price, with buyers valuing lifetime, energy efficiency, and process stability in harsh electrolytes. Demand is anchored by replacement cycles in established industries such as chlor-alkali and electrochlorination, electroplating and metal finishing, cathodic protection, and increasingly by growth niches like advanced wastewater electro-oxidation and certain electrolyzer designs, where coating performance and durability directly affect operating cost and uptime. The competitive landscape is relatively concentrated at the high end, with established players differentiated by proprietary coating formulations, quality control, and application engineering support, while a broad long-tail of regional suppliers competes on standard MMO geometries and faster lead times. Pricing and margins are sensitive to precious-metal inputs (Ir, Ru, Pt) and fabrication yield, so suppliers actively manage coating loading, recycling/refurbishment programs, and long-term contracts; on the demand side, customers are pushing for longer-life coatings, reduced noble-metal intensity, and more transparent performance guarantees, while tightening environmental and safety expectations are gradually favoring higher-efficiency, lower-maintenance electrode solutions over sacrificial or higher-consumable alternatives.
