Abstracts

The mobile sound insulation wall is a group of sound insulation walls composed of each single partition. Each piece is equipped with two horizontal lifting wheels. The horizontal lifting wheels are used for hanging travel along the track. It can make a 90 degree right angle turn for free travel. It can be flexibly pushed to other spaces for collection. Multiple independent small spaces can be separated according to different space use needs. The vertical contact of each single partition is connected by concave and convex positions, embedded with sealant strips, and the upper and lower top are equipped with a retractable sound insulation sealing mechanism.
