Abstracts

The global Mobile Cloud Library market size is expected to reach \$ 815 million by 2032, rising at a market growth of 6.2% CAGR during the forecast period (2026-2032).

Mobile cloud libraries extend traditional library services to mobile devices. Users can access library resources and services anytime and anywhere through mobile devices such as smartphones and tablets. At the same time, with the help of cloud computing technology, libraries can achieve centralized storage, unified management and efficient use of resources, providing users with a more convenient and personalized reading experience. Mobile cloud libraries are widely used in various libraries, schools, scientific research institutions, and public reading places. It provides users with a more convenient and efficient way to read, and also provides library managers with a more intelligent and flexible management method. The industry's gross profit margin is approximately 35-45%.

Market drivers mainly include,

Policy support and the promotion of cultural digitization strategies: The national '14th Five-Year Plan' explicitly proposes 'building a smart library system,' promoting the free opening of public libraries and the popularization of the branch library system, providing infrastructure support for mobile cloud libraries; strengthened copyright protection (such as continuing the VAT exemption policy for book wholesale and retail) promotes the aggregation of genuine resources and enhances the platform's content competitiveness.

Upgraded User Needs and Diversified Scenarios: The growing demand from individual users for 'fragmented reading + deep learning' is driving platforms to transform from

simple lending to a model combining 'resources + community + services' (such as book clubs and expert lectures). Enterprises and schools need mobile libraries for employee training and student self-directed learning management, creating a demand for customized solutions. In the public cultural sector, LBS technology is building '15-minute reading circles' to solve resource access problems in remote areas.

Technological Integration and Business Model Innovation: 5G and AI technologies reduce content transmission latency and improve recommendation accuracy (such as personalized recommendations based on reading habits). Blockchain technology ensures the security of borrowing data and enhances user trust. Platforms diversify their revenue streams through 'free basic services + value-added paid content' (such as exclusive courses and advanced data analysis), attracting capital investment and accelerating industry iteration.
