Mobile crusher and screener machine is designed to crush large rocks into small rocks, gravel or dust. A crusher holds material which is to be crushed between two parallel solid surfaces. Sufficient force is applied to the material by crusher that generates enough energy to crush material by fracturing or deform the material. Screening is the process of taking granular ore material and separating it into multi-grades by size. Various types of screeners are used for the screening process. Both crusher and screens are used in the mining industry to crush the rock and then separate those using screeners.

Major companies in the industry include Kleemann, Terex Corporation, McCloskey International, etc. The top three enterprises account for more than 43% of the revenue. By region, the U.S. has the highest share of value, reaching 33.16% in 2019.
