The global Mobile Data Recovery Software market size is expected to reach \$ 1957 million by 2032, rising at a market growth of 13.5% CAGR during the forecast period (2026-2032).

Mobile data recovery software is a type of professional tool installed on a computer or mobile phone. It scans, analyzes, reassembles, and restores data from accidentally deleted, formatted, flashed, crashed, virus-infected, or lost mobile phones by reading low-level data such as the phone's storage chip/flash memory, system cache, database fragments, and deleted file indexes. Primarily targeting iOS and Android devices, it falls under the category of data security and data recovery tools. Its core function is to scan the phone's storage (including internal storage and external SD card), identify recoverable data files, and provide options for recovery or export.
