According to our (Global Info Research) latest study, the global Mobile Encryption market size was valued at USD 1962.7 million in 2023 and is forecast to a readjusted size of USD 5228.8 million by 2030 with a CAGR of 15.0% during review period.

This report studies the Encryption software used for Mobile market. Mobile device encryption offers an easy fix for the problem of data breaches, which are the top threat posed by lost or stolen smartphones and tablets.

Encryption software is software that uses cryptography to make digital information difficult to read. Practically speaking, people use cryptography today to protect the digital information on their Mobile device as well as the digital information that is sent to other device over the Internet. As software that implements secure cryptography is complex to develop and difficult to get right, most computer users make use of the encryption software that already exists rather than writing their own.
