Abstracts

The global Mobile Heavy-Duty Truck Charging and Battery Swapping Station market size is expected to reach \$ 1653 million by 2032, rising at a market growth of 42.5% CAGR during the forecast period (2026-2032).

A Mobile Heavy-Duty Truck Charging and Battery Swapping Station is a movable, relocatable, or modular energy replenishment facility for electric heavy-duty trucks. It combines battery charging, charged-battery storage, automatic battery swapping, safety monitoring, and digital dispatching in one system. When a truck arrives, the depleted traction battery is removed and replaced with a charged battery pack within a few minutes, while the removed battery is charged inside the station for later use. Battery swapping is designed to reduce downtime for heavy-duty trucks, which often operate long hours and cannot afford long charging stops.

Compared with a pure charging station, it emphasizes fast battery replacement; compared with a fixed swapping station, the ?mobile? type emphasizes truck-mounted, containerized, skid-mounted, modular, or relocatable deployment.
