## **Abstracts**

Mobile and wireless backhaul solutions are adopted by the telecom and IT industry across the globe to boost the customer experience by managing the networks and distributing the huge data traffic.

Scope of the Report:

Unlike conventional wire connected network which requires stretching of wire over a long distance for data transfer, wireless and mobile backhaul equipment doesn't require any wire. Wireless & mobile backhaul equipment can transfer data packets at speed ranging between 1 Mbps to 2 Gbps.

The increasing use of digital devices such as smart phones and other smart devices, generating large volume of data over the present network is driving the market for wireless & mobile backhaul equipment market over the forecast period. In order to utilize the free spectrum, most of the operators started deploying small cells and wireless devices, which are expected to generate high network load. To support this high network load, a highly efficient wireless and mobile backhaul equipment is needed, which is expected to drive the demand for wireless and mobile backhaul equipment market over the forecast period.

The global Mobile and Wireless Backhaul Equipment market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.
