Abstracts

NAND flash memory is a type of nonvolatile storage technology that does not require power to retain data. An important goal of NAND flash development has been to reduce the cost per bit and to increase maximum chip capacity so that flash memory can compete with magnetic storage devices, such as hard disks.

Scope of the Report:

This report focuses on the Mobile NAND Flash in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Compared to RAM + NOR, NAND based MCP solutions provide non-volatile storage of data. This means, unlike in the past when DRAM memory was used, NAND memory retains data even when the power is off — making it ideal as storage for portable devices. Similarly, POP and high-density embedded storage chips reduce the number of chips employed in a mobile device, thereby saving space and simplifying the design.

The worldwide market for Mobile NAND Flash is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
