A Mobile Order-picker is a device used for order picking in warehouses or logistics centers. It typically consists of a mobile cart and a grabbing device, which can hold shelves and move freely within the warehouse. Mobile Order-pickers often use RF scanning technology or voice technology to guide operators to the correct products and locations within the warehouse. Once the operator finds the correct location, the Mobile Order-picker can assist in removing the product from the shelf and placing it into a collecting bin. Additionally, some modern Mobile Order-pickers are equipped with other features, such as automatic navigation, fast positioning, and cargo tracking. The introduction of Mobile Order-pickers has greatly improved the efficiency and precision of logistics operations within the warehouse, saving businesses time and costs.
