Abstracts

The lens is a device that images the scene on the sensor. It is equivalent to the 'eye' of the camera. It is usually composed of several lenses. When light passes through, the lenses will filter stray light (infrared, etc.) layer by layer. Therefore, the number of lenses The more, the more realistic the imaging will be. From the material point of view, lenses can be divided into plastic lenses (Plastic) and glass lenses (Glass). Glass lenses have better light transmittance and image quality, but the cost is also higher. Therefore, most phone iamging lenses are composed of plastic lenses. A 5p lense is a lens composed of 5 plastic lenses.
