## Abstracts

The global Mobile Phone and Tablet Adhesive market size is expected to reach \$ 1664 million by 2032, rising at a market growth of 7.3% CAGR during the forecast period (2026-2032).

In 2025, global sales of Mobile Phone and Tablet Adhesive reached approximately 8,200 tons, with an average selling price of US\$120,000 per ton. Total production capacity was approximately 11,500 tons, and gross profit margin remained around 28%. Adhesives for mobile phones and tablets are functional materials used to fix and seal screens, glass panels, metal frames, and internal structural components of electronic devices. They are mainly composed of acrylic, epoxy, silicone, and polyurethane polymer colloids and functional additives. Upstream raw materials include monomer resins, curing agents, tackifiers, and surfactants. Consumption is highly correlated with production volume. Downstream suppliers are mainly mobile phone manufacturers, tablet manufacturers, and electronic assembly plants. In the future, with the popularization of foldable screens, full-screen displays, and thinner designs, the market demand for high-transparency, high-strength, fast-curing, and environmentally friendly adhesives will continue to grow. Research and development innovation and process optimization of upstream raw materials will directly determine product performance and cost competitiveness. Business opportunities are mainly concentrated in high-reliability adhesives, flexible electronic adhesives, and environmentally friendly solvent-free products.
