According to our (Global Info Research) latest study, the global Mobile Radiation Shielding Screen market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The main consumer markets of the Mobile Radiation Shielding Screen are North America and Asia. With the gradual recovery of the global economy after the COVID-19 outbreak and the return of major economies to normal, the medical industry will see certain growth. More and more hospitals and clinics are able to carry out imaging tests. As a result, the demand for Mobile Radiation Shielding Screen will increase in the foreseeable future.

The Mobile Radiation Shielding Screen, also known as an EMF (electromagnetic field) shielding screen or a radiation blocking phone case, is a device that is designed to reduce the amount of electromagnetic radiation emitted by mobile phones and other wireless devices. These screens are made from materials that can block or absorb electromagnetic radiation, such as metal, carbon fiber, or special fabrics. The idea behind these screens is that they can help protect users from the potential health risks associated with long-term exposure to electromagnetic radiation. While the scientific evidence regarding the health effects of mobile phone radiation is still inconclusive, some studies have suggested that prolonged exposure to high levels of electromagnetic radiation could increase the risk of certain types of cancer, tumors, and other health problems. Mobile radiation shielding screens are available for purchase online or in specialty stores. They come in various designs, including cases, stickers, and patches

that can be applied directly to the phone or device. It is important to note that while these screens may reduce the amount of radiation emitted by a device, they cannot completely eliminate it.
