Abstracts

Mobile satellite services (MSS) refers to networks of communications satellites intended for use with mobile and portable wireless telephones. There are three major types: AMSS (aeronautical MSS), LMSS (land MSS), and MMSS (maritime MSS).

Scope of the Report:

The increase in demand for mobility, rise in integration between mobile and satellite technology, and advancement in digital technology majorly drive the MSS market.

However, low available bandwidth and poor quality of voice and data in inadequate signal conditions, and increase in government regulations on the use of satellite technology restrict the market growth.

Growth in trend of Internet of Things (IoT), allocation of additional bandwidth for MSS, and increase in competition in the Internet service market create abundant growth opportunities. However, lack of assurance for the reliability of MSS over different regions is the key challenge for MSS market growth.

The global Mobile Satellite Services market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.
