Abstracts

According to our (Global Info Research) latest study, the global Mobile Screening Equipment market size was valued at US\$ 12605 million in 2025 and is forecast to a readjusted size of US\$ 22207 million by 2032 with a CAGR of 8.4% during review period.

In 2025, global sales of mobile screening equipment reached 98,000 units, with an average selling price of US\$125,000 per unit. Mobile screening equipment is a type of mobile material grading equipment that integrates feeding, screening, and conveying functions. It typically uses a tracked or wheeled chassis structure and can be quickly deployed and flexibly moved to sites such as mines, construction waste treatment plants, aggregate production facilities, and soil remediation facilities. It grades materials according to particle size using different screening mechanisms such as vibrating screens, drum screens, or high-frequency screens. It features high mobility, reduced secondary material handling, and adaptability to complex working conditions, making it an important type of equipment to replace fixed screening stations.

Upstream raw materials mainly include structural steel, wear-resistant steel plates, vibrating motors, hydraulic systems, diesel engines or electric drive systems, screens, and control systems. Downstream applications are mainly in mining companies, construction companies, recycling companies, and infrastructure projects. In 2025, the global total production capacity was approximately 115,000 units, with an average gross profit margin of approximately 27%.

In the future, with the continued advancement of infrastructure investment and the increasing demand for resource recycling, mobile, intelligent and electric screening

equipment will become the development direction. Especially under the background of increasingly stringent environmental protection policies, low-emission and high-efficiency equipment will have a larger market space. At the same time, the infrastructure construction demand in emerging overseas markets will also bring incremental opportunities.

The mobile screening equipment market is currently experiencing a dual growth phase driven by both engineering demand and environmental policies. Its core logic lies in replacing traditional fixed screening methods and improving on-site operational efficiency. On the one hand, global infrastructure construction, mining, and aggregate demand continue to expand, especially against the backdrop of shortened project cycles and increased demands for construction flexibility. Mobile equipment, with its advantages of being readily available and requiring no complex civil engineering, is rapidly penetrating the market. On the other hand, increasingly stringent policies regarding construction waste recycling and solid waste treatment are driving significant growth in demand for recycled aggregate screening, becoming a crucial source of incremental growth for the industry.

From a competitive perspective, the market exhibits a structure of 'European and American brands dominating the high-end market + rapid rise of Chinese manufacturers.' International manufacturers have advantages in overall machine stability and brand channels, while Chinese companies, relying on cost-effectiveness and supply chain responsiveness, possess strong competitiveness in the mid-range and emerging markets.

In terms of technological trends, equipment is developing towards electrification (replacing diesel drive), intelligent control (remote monitoring and fault diagnosis), and modular combinations. Simultaneously, forming complete solutions with mobile crushing equipment is becoming a mainstream competitive point.

In the short term, industry demand is greatly affected by the pace of infrastructure investment and fluctuations in the real estate cycle. However, in the medium to long term, mobile screening equipment still has strong growth resilience against the backdrop of green mining, renewable resource utilization, and global infrastructure upgrades, especially with significant expansion potential in emerging markets such as Asia, Africa, and Latin America.
