## **Abstracts**

Mobile signal boosters are devices that provide strength to a weak signal by amplifying the carrier frequency signal. Due to the presence of numerous dead spots where there is no signal or very poor signal, there is a significant opportunity for the global mobile signal booster market as mobile signal boosters help wireless network providers to improve coverage in such areas and hence improve the quality of service.

### **Scope of the Report:**

This report focuses on the Mobile Signal Booster in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The increasing number of connected devices have resulted in higher spectrum utilization. Such rise in spectrum demand has led the mobile operators to utilize a higher range of frequencies, which can cater a higher number of customers. As a consequence, the capacity of a signal to travel longer distances lowers, as the wavelength of a signal and frequency are inversely related. To bridge this gap between the increasing number of users and adequate signal strength, the users depend on of signal boosters.

The worldwide market for Mobile Signal Booster is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
