Abstracts

The global Mobile Telescopic Stacker market size is expected to reach \$ 2076 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

In 2025, global sales of mobile telescopic stackers reached 24,000 units, with an average selling price of US\$56,000 per unit. Mobile telescopic stackers are warehousing and logistics handling equipment that integrates walking, lifting, and telescopic fork mechanisms. They achieve high-level stacking, retrieval, and short-distance transfer of goods through electric or hydraulic drive systems. The equipment typically consists of a chassis, telescopic fork mechanism, lifting mast, electric drive system, hydraulic system, and control system. It can perform high-density racking storage operations in narrow aisle environments and is widely used in e-commerce warehousing, logistics distribution centers, manufacturing warehouses, cold chain warehousing, and automated storage and retrieval systems. This equipment uses a telescopic fork structure to allow for forward and backward loading and unloading of goods, thereby reducing vehicle travel distance and improving warehousing operation efficiency. The industry's total global production capacity is approximately 32,000 units per year, with an overall gross profit margin of approximately 20%-28%. The main upstream raw materials include structural steel, motors, speed reducers, lithium or lead-acid batteries, hydraulic cylinders, controllers, and sensors. Downstream demand mainly comes from e-commerce and third-party logistics warehousing, manufacturing warehouses, cold chain and food warehousing, as well as port logistics and automated warehousing system integration. With the expansion of global e-commerce logistics, the upgrading of warehousing automation, and the increase in the construction of high-density warehouses, the application of mobile telescopic stacker cranes in intelligent warehousing systems and flexible logistics equipment continues to grow. In the future,

there will still be significant demand growth and industry opportunities in the fields of unmanned warehousing, automated distribution centers, and intelligent logistics equipment.
