## Abstracts

The global Mobile Tire Press Service market size is expected to reach \$ 1700 million by 2032, rising at a market growth of 11.3% CAGR during the forecast period (2026-2032).

Mobile tire press service refers to a door-to-door automotive aftermarket service model that utilizes service vehicles or technical teams equipped with mobile tire pressers, dynamic balancing equipment, and on-site tools to complete tire removal, pressing, replacement, and dynamic balancing at the customer's location. It is suitable for private cars, logistics fleets, construction vehicles, and shared mobility vehicles, reducing the time car owners spend traveling to and from repair shops and improving vehicle operating efficiency. This service typically relies on digital platform booking, GPS dispatch, and mobile payment systems to achieve instant response and rapid on-site service, making it particularly suitable for urban roadside assistance, corporate fleet maintenance, and emergency tire changes at night. With the increase in car ownership, the rise of e-commerce tire sales, and the strengthening trend of fleet maintenance outsourcing, mobile tire pressing service is gradually becoming an important supplement to traditional tire shops and is developing towards intelligent dispatch and chain operation.
