The global Mobile Unloader market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Mobile unloader is a specialized equipment used for efficient unloading of bulk cargo from ships or barges. It is designed to be self-propelled and capable of moving along the dock or quay to access different vessels. The mobile unloader typically consists of a boom or conveyor system that extends over the ship's cargo hold. It is equipped with a grabbing or suction mechanism that can handle various types of bulk materials such as coal, grain, ores, fertilizers, cement, and more. The unloader grabs or suctions the cargo from the ship's hold and transfers it onto a conveyor belt or other transfer system for further transportation to storage or processing facilities
