Abstracts

Mobile VoIP or simply mVoIP is an extension of mobility to a Voice over IP network. Two types of communication are generally supported: cordless/DECT/PCS protocols for short range or campus communications where all base stations are linked into the same LAN, and wider area communications using 3G/4G protocols.

Scope of the Report:

This report studies the Mobile VoIP market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Mobile VoIP market by product type and applications/end industries.

The deployment of 4G/LTE is one of the key drivers boosting the industry growth. The increase in the capability of wireless bandwidth services and growing investment by telecom operators in the deployment of a high-speed network is expected to enhance the usage of these services over the forecast period. Moreover, mobile VoIP service eliminates the need for voice plans, text add-ons and achieves flexibility in making unlimited, inexpensive or free calls.
