Abstracts

According to our (Global Info Research) latest study, the global Mobility Support Robots market size was valued at US\$ 3282 million in 2025 and is forecast to a readjusted size of US\$ 9880 million by 2032 with a CAGR of 17.0% during review period.

In 2025, global Mobility Support Robot output reached about 400,000 units and global capacity of around 600,000 units. The average price is about USD 8,000 per unit, with gross margins near 36%. Mobility Support Robots are robotic systems designed to assist individuals?especially the elderly, disabled, or rehabilitation patients?with physical movement, including walking assistance, lifting, transfer (e.g., bed-to-wheelchair), and mobility augmentation in daily life or clinical settings; they integrate technologies such as sensors, actuators, AI-based motion control, and human?machine interfaces to enhance safety and independence. The supply chain starts upstream with core components such as electric motors, servo drives, batteries, sensors (LiDAR, pressure, vision), control chips, and structural materials (aluminum alloys, composites), supplied by electronics and component manufacturers; midstream involves robot OEMs and system integrators who design and assemble mobility robots (e.g., exoskeletons, robotic walkers, transfer robots) and develop embedded software and AI algorithms; downstream includes distribution channels and service providers such as hospitals, rehabilitation centers, elderly care facilities, and homecare markets, along with after-sales services, maintenance, and software updates, often supported by healthcare providers and insurance systems.
