The global Mode 2 Portable Charging Gun market size is expected to reach \$ 316.9 million by 2029, rising at a market growth of 3.0% CAGR during the forecast period (2023-2029).

With the rapid rise of the electric vehicle market, portable charging guns have become a highly sought-after charging solution. The portability of these charging guns allows for fast and convenient charging in various situations. Users can charge at home, at their workplace, and even while on the go. Market trends indicate a growing demand for portable charging guns, especially in urban environments where the lack of charging infrastructure has led people to rely more on this flexible charging option. Furthermore, as electric vehicle range continues to improve, users want the ability to quickly top up their batteries when needed, making portable charging guns one of the most promising products in the market.

Mode 2 charging involves the use of special cables with integrated protection against AC and DC surges. Unlike Mode 1 charging, Mode 2 charging cables have built-in protection in the cable to prevent the risk of electric shock and fire. Mode 2 charging is currently the most common charging mode for electric vehicles. It charges in alternating current through a household or industrial socket with a protective device integrated into the charging cable. Current and voltage ratings shall not exceed 32A and 250 VAC in a single phase or 32A and 480 VAC in a three-phase installation.
