According to our (Global Info Research) latest study, the global Model Rocket market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Model rockets are constructed of much safer materials — such as cardboard, plastic, and balsa wood — and are fueled by single-use rocket motors manufactured by professional businesses. These rockets may be flown over and over simply by replacing the used motor with a fresh one. They typically contain a parachute, streamer, or other recovery device that allows them to land gently for later reflight. The modeler need never mix, pack, or work with explosives or propellants.
