According to our (Global Info Research) latest study, the global Modified Acrylic Emulsion market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Acrylic emulsion has many advantages, but it also has many disadvantages when used alone, such as low hardness, slightly poor mechanical properties, slightly poor compactness of paint film, high film forming temperature, etc., which limit its application range. In order to expand its application field, it is an important way to modify acrylic emulsion to make its properties meet the application requirements. The research on the modification of acrylic emulsion includes physical blending and chemical modification. At present, the main directions of chemical modification of acrylic emulsion are: silicone modified acrylic emulsion, organic fluorine modified acrylic emulsion, epoxy modified acrylic emulsion, polyurethane modified acrylic emulsion, inorganic nanoparticles modified acrylic emulsion, etc.
