## Abstracts

The global Modified Acrylic Emulsion market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Acrylic emulsion has many advantages, but it also has many disadvantages when used alone, such as low hardness, slightly poor mechanical properties, slightly poor compactness of paint film, high film forming temperature, etc., which limit its application range. In order to expand its application field, it is an important way to modify acrylic emulsion to make its properties meet the application requirements. The research on the modification of acrylic emulsion includes physical blending and chemical modification. At present, the main directions of chemical modification of acrylic emulsion are: silicone modified acrylic emulsion, organic fluorine modified acrylic emulsion, epoxy modified acrylic emulsion, polyurethane modified acrylic emulsion, inorganic nanoparticles modified acrylic emulsion, etc.

This report studies the global Modified Acrylic Emulsion production, demand, key manufacturers, and key regions.
