According to our (Global Info Research) latest study, the global Modified Atmosphere Packaging (MAP) Machines market size was valued at USD 1406.6 million in 2023 and is forecast to a readjusted size of USD 1659.7 million by 2030 with a CAGR of 2.4% during review period.

Modified Atmosphere Packaging (MAP) machines are packaging systems used to create a controlled atmosphere within a package or container to extend the shelf life and preserve the quality of perishable products. These machines utilize gas flushing techniques to replace the air inside the package with a modified gas mixture that consists of specific proportions of oxygen, nitrogen, or carbon dioxide. By altering the gas composition, MAP machines can slow down the growth of bacteria, inhibit oxidation, and preserve the freshness of food, pharmaceuticals, and other sensitive products. MAP machines are widely used in the food industry to maintain product quality, increase shelf life, and reduce food waste.

The industry trend for Modified Atmosphere Packaging (MAP) machines is experiencing significant growth as manufacturers across various sectors, particularly the food industry, seek longer shelf lives and enhanced product quality. With increasing consumer demand for fresh and minimally processed products, MAP machines provide an effective solution. The trend is driven by the growing awareness of food safety, sustainable packaging practices, and the need to reduce food waste. Moreover, advancements in MAP technology, such as improved gas mixing, faster cycle times, and precise control systems, contribute to the increasing adoption of MAP machines. As the industry focuses on maintaining product quality, safety, and sustainable packaging practices, the trend for MAP machines is expected to continue its upward trajectory.
