## Abstracts

According to our (Global Info Research) latest study, the global Modified Composite Plastics market size was valued at US\$ 133764 million in 2025 and is forecast to a readjusted size of US\$ 160046 million by 2032 with a CAGR of 2.0% during review period.

Modified composite plastics are materials whose properties are optimized through physical or chemical methods for general-purpose or engineering plastics. Through modification techniques such as filling, blending, reinforcement, toughening, flame retardancy, and cold resistance, they significantly improve the mechanical strength, toughness, heat resistance, and flame retardancy of plastics, enabling them to meet a wider range of application needs.

QYResearch analysts point out that the current capacity utilization rate of modified composite plastics in development is low, with almost no significant new capacity additions, which is completely different from developing countries such as China and India. Currently, global demand for modified composite plastics exceeds 70 million tons, with a global market size exceeding US\$130 billion.
