Abstracts

According to our (Global Info Research) latest study, the global Modular Action Camera market size was valued at US\$ 432 million in 2025 and is forecast to a readjusted size of US\$ 1685 million by 2032 with a CAGR of 17.6% during review period.

Modular action cameras are consumer-grade sports recording devices designed with separate imaging/sensing modules and display screens, batteries, controllers, docks, or processing hosts. They typically support individually wearable cameras, magnetic mounting, dock-based preview and control, extended battery life, and fast data transfer. They are primarily used for POV recording, vlogging, cycling, outdoor sports, and lightweight content creation. The gross margin for this category is approximately 42%.

Modular action cameras remain a niche segment within the broader action camera market, but their growth outpaces that of standard all-in-one models. Core growth comes from wearable POV use, short-form video creation, family and pet recording, cycling, and travel vlogs, with user motivations shifting from “extreme sports recording” to “lightweight, on-the-go shooting.”

The year 2025 serves as a product validation period, with devices like the DJI Osmo Nano, Insta360 GO Ultra, and SJCAM C400 driving the trend of separating the camera from the dock/controller. In 2026, with a full sales year, the market size is expected to increase from USD 420 million to USD 620 million, significantly outpacing the overall action camera market.

Future competition will focus on camera module battery life, heat dissipation, image stabilization, low-light performance, magnetic ecosystem, and software editing

capabilities. While the BOM cost is higher than that of standard action cameras, high unit prices and accessory repurchase support strong gross margins. The category is expected to achieve a CAGR of approximately 18.0% over the next six years.
