## Abstracts

The global Modular Carbon Capture Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Modular Carbon Capture Machine, which means extracting carbon dioxide directly from the air, is based on a series of chemical reactions such as adsorption, and then storing it safely and permanently. The only reasonable method of disposal is geological storage, which is being used by many companies to combat the current state of global warming in order to meet the net-zero emission targets of the Paris Agreement. The captured CO<sub>2</sub> can also be used in agriculture, food processing or combined with hydrogen to produce synthetic fuels.

This report studies the global Modular Carbon Capture Machine production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Modular Carbon Capture Machine, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
