Abstracts

A cleanroom is an environmentally controlled enclosure determined by the number of airborne particulates, temperature, air pressure, humidity, airflow patterns and motion, static charges, and lighting.

Scope of the Report:

This report focuses on the Modular Cleanroom in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Adhesion of particles is prevented to ensure high-quality, reliable products and operations. The cleanliness of a cleanroom is determined based on the number of dust particles contained in a unit volume of air, usually per cubic meter of air. A cleanroom that contains less amount of dust part suspended per unit volume of air carries a lower numeric value, which implies high grade.

Cleanroom technology protects the final products as well as manufacturing processes against contaminants. It is an integral part of healthcare industry, serving the purpose of developing standardized products as per regulatory norms.

The worldwide market for Modular Cleanroom is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
