Abstracts

The global Modular Golf Simulator market size is expected to reach \$ 778 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

A Modular Golf Simulator is an indoor or semi-indoor golf simulation system designed with replaceable and configurable modules, such as launch monitors, impact screens, hitting mats, projector systems, enclosure frames, swing analysis software, and optional putting or training modules. Compared with a fixed golf simulator room, a modular golf simulator is easier to install, expand, move, and customize according to different space sizes and user needs. It is widely used in golf training centers, indoor golf clubs, commercial entertainment venues, hotels, sports facilities, and high-end residential spaces. In 2025, global Modular Golf Simulator production reached approximately 8482 units, with an average global market price of around 60 k USD/unit. The production capacity for Modular Golf Simulator in 2025 was approximately 10000 units. The typical gross profit margin for Modular Golf Simulator between 20% and 40%.

The Modular Golf Simulator market is growing steadily as indoor sports, digital golf training, and entertainment-based fitness solutions gain popularity. Demand is driven by golf training centers, commercial simulator venues, country clubs, hotels, corporate leisure spaces, and residential users who require flexible, space-saving, and scalable golf simulation solutions. Compared with traditional fixed simulator installations, modular systems offer easier deployment, lower renovation requirements, and better adaptability to different room layouts, making them attractive for both commercial and personal use. The market is also supported by improvements in launch monitor accuracy, 3D course simulation, AI swing analysis, projector and screen technology, and connected training software.
