According to our (Global Info Research) latest study, the global Minimally Invasive Surgery market size was valued at USD 492.4 million in 2023 and is forecast to a readjusted size of USD 687.3 million by 2030 with a CAGR of 4.9% during review period.

The rise in geriatric population throughout the globe is contributing greatly to the increasing number of various minimally invasive surgeries (MIS) such as breast, orthopedic, cardiac, gynecological and urological surgeries. This is mainly because, elderly people belong to the high risk patient category for performing conventional open surgeries due to their already compromised health and slow recovery from debilitating conditions. MIS is performed with a tiny incision in the patient's body that results in faster recovery, minimal stay in the hospital, and minimal pain and trauma to the patient.

These surgeries are performed with the help of various devices that include surgical devices, monitoring and visualization devices, and endoscopy devices.
