Abstracts

The global Modular Immersion Cooling System market size is expected to reach $ 1276 million by 2032, rising at a market growth of 5.8% CAGR during the forecast period (2026-2032).

In 2025, global production of modular immersion cooling systems reached 11,195 units, with an average selling price of 75,000 USD per unit. The global annual production capacity of modular immersion cooling systems is about 15,000 units, and the gross profit margin is about 38.3%. The modular immersion cooling system is an innovative thermal management system that submerges IT equipment such as servers entirely in dielectric coolant, integrating functions including coolant circulation, heat exchange, power supply, and monitoring into standardized, flexibly assembled modular units. During operation, the heat?generating components are fully immersed in the coolant, utilising the liquid's high heat capacity to directly absorb waste heat; a circulation pump then sends the heated liquid to external heat exchange equipment for cooling before returning it, thus forming a closed loop and achieving centralized, efficient cooling for high?power?density equipment. Meanwhile, the modular design facilitates on?demand expansion, rapid deployment, and flexible maintenance. Compared with traditional air cooling and cold?plate liquid cooling, this system offers advantages such as stronger heat dissipation, lower energy consumption, and less noise. It is widely used in AI high?density computing clusters, cloud data centers, and other scenarios, and represents an important technological direction for green and energy?efficient data centers. The upstream sector of the modular immersion cooling system industry chain includes cooling mediums, electrical components, and heat exchange equipment. The midstream sector consists of modular immersion cooling system manufacturers, while the downstream sector is mainly applied in data centers, aerospace, and other industries.

Currently, the modular immersion cooling system market is in a period of rapid growth, primarily driven by the explosive expansion of AI computing clusters and the urgent need for green energy efficiency in data centers. With its excellent heat dissipation efficiency and space utilization, this system has become the preferred solution for high?power?density scenarios. As single?phase and two?phase technologies continue to mature, the reliability and economic viability of the system have been steadily improving, and its applications are expanding from hyperscale cloud data centers to edge computing, high?performance computing, and beyond. Meanwhile, the modular design philosophy enables flexible adaptation to different deployment scales, lowering the initial investment threshold for customers. Innovation within the industry is increasingly active around coolant optimization, system integration, and operational convenience, and the overall market shows a healthy development trend characterized by accelerating technological iteration and deepening ecosystem collaboration.

Report Scope

This report studies the global Modular Immersion Cooling System production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Modular Immersion Cooling System and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Modular Immersion Cooling System that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Modular Immersion Cooling System total production and demand, 2021-2032, (Units)

Global Modular Immersion Cooling System total production value, 2021-2032, (USD Million)

Global Modular Immersion Cooling System production by region & country, production, value, CAGR, 2021-2032, (USD Million) & (Units), (based on production site)

Global Modular Immersion Cooling System consumption by region & country, CAGR, 2021-2032 & (Units)

U.S. VS China: Modular Immersion Cooling System domestic production, consumption, key domestic manufacturers and share

Global Modular Immersion Cooling System production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (Units)

Global Modular Immersion Cooling System production by Type, production, value, CAGR, 2021-2032, (USD Million) & (Units)

Global Modular Immersion Cooling System production by Application, production, value, CAGR, 2021-2032, (USD Million) & (Units)

This report profiles key players in the global Modular Immersion Cooling System market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Fujitsu, Supermicro, Delta Electronic, Araner, CoolBitts, DUG, Aspsys, Ingrasys, Asperitas, PEZY, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the World Modular Immersion Cooling System market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US$ Millions), volume (production, consumption) & (Units) and average price (US$/Unit) by manufacturer, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.
