Abstracts

According to our (Global Info Research) latest study, the global Modular Industrial UPS market size was valued at US\$ 1029 million in 2025 and is forecast to a readjusted size of US\$ 1360 million by 2032 with a CAGR of 3.9% during review period.

A Modular Industrial UPS is a high-availability power protection system specifically engineered for demanding industrial sectors. Unlike conventional standalone units, it utilizes a framework of independent, hot-swappable modules that house essential components like rectifiers, inverters, and logic controllers. The modular architecture facilitates Scalability and Redundancy (typically N+1 or N+X configurations), allowing the system capacity to grow alongside the facility's power demands. Because modules can be replaced 'on-the-fly' without transferring the load to bypass or shutting down the system, the Mean Time To Repair (MTTR) is significantly reduced. Built with industrial-grade ruggedization, these systems are designed to withstand harsh conditions—such as extreme temperatures, high humidity, and electrical noise—common in manufacturing plants, oil and gas refineries, and utility substations.

In 2025, global Modular Industrial UPS production reached approximately 50000 units, and average price was 20000usd/unit.

Global Industrial UPS key players include EATON, Emerson, Schneider-Electric, ABB, AEG, etc. Global top five players hold a share about 70%. North America is the largest market, with a share about 30%, followed by China and Europe, having a total share about 50 percent. In terms of product, AC Industrial UPS is the largest segment, with a share about 65%. And in terms of application, the largest application is Chemical Industry, followed by Petroleum Industry, Electric Power Industry, Light Industry.
