Abstracts

According to our (Global Info Research) latest study, the global Modular Logic Analyzer market size was valued at US$ 480 million in 2025 and is forecast to a readjusted size of US$ 795 million by 2032 with a CAGR of 7.6% during review period.

Logic Analyzer is a device designed for recording and analyzing digital sequences. Available as stand-alone devices, as well as in the form of USB set-top boxes to a PC. The main characteristics of logic analyzers are: the number of channels and the maximum data reading rate (sampling rate). Modular logic analyzers can be rack-mounted or cards that slide into a backplane. You can swap out various modular units to create a unique set of test equipment for your specific needs. Most often, modular analyzers require computer software to control collection and analyze data. Having a separate computer gives you a potentially larger screen and an easier path to upgrade the software. However, you are limited by the connection speeds (for example, USB or Ethernet) between the test equipment and computer.

According to present estimations, there are more than 50 billion devices in the world that are connected to the internet. The key drivers for the market of logic analyzers are the growth proportions in the automotive, electronics, healthcare, etc industries. Logical analyzers can be used in personal computers, memory devices, and more importantly in integrated circuits (IC). The use of the instrument in semiconductors is a popular and vast market driver for logic analyzers.
