According to our (Global Info Research) latest study, the global Modular Steel Construction market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Modular steel construction is a construction method that uses prefabricated steel structural modules to construct buildings. This approach breaks down the construction process into modular parts, pre-produced in factories and then assembled on site. Each module typically includes structural steel framing, wall panels, roofing, and other components, and can include installed equipment, plumbing, and electrical systems. The modules are manufactured with precision and quality control in the factory and then transported to the site for rapid assembly. Modular steel structure buildings have the advantages of speed, flexibility, cost and resource saving, so they are widely used in commercial, industrial, residential and public buildings and other fields.
